CMLI-15/15PCA

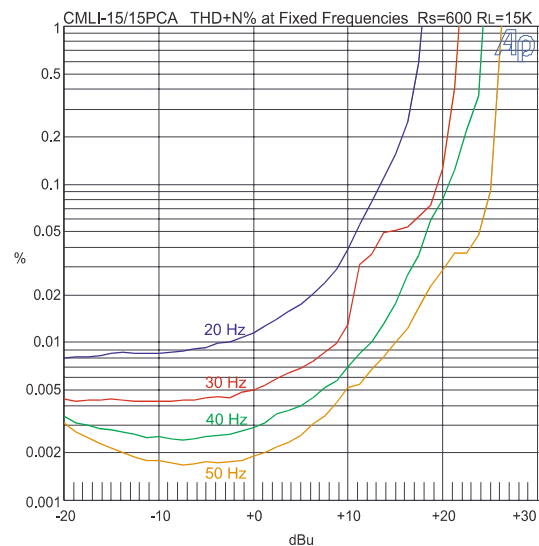

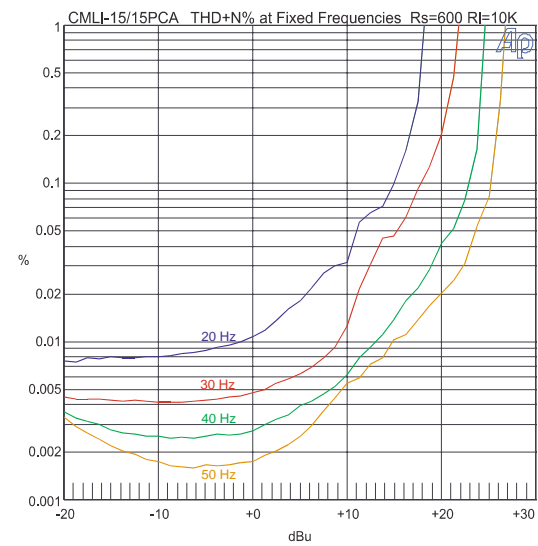

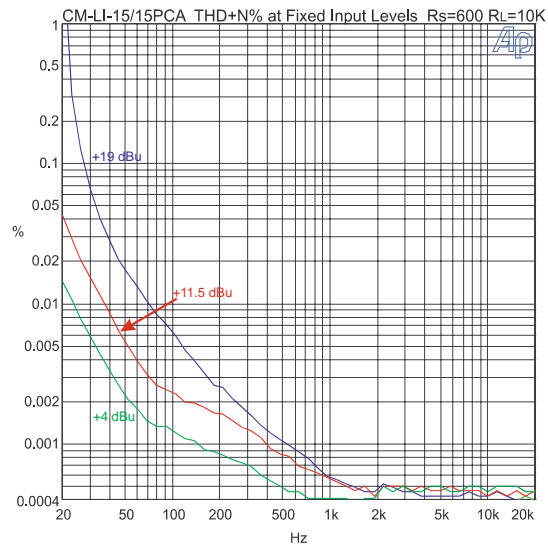

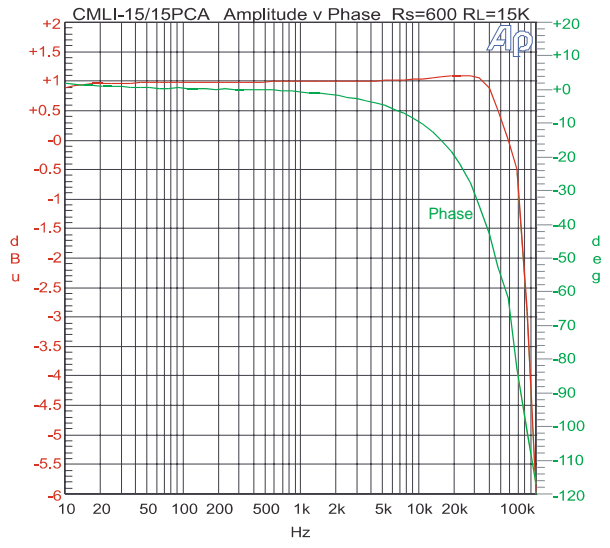

Line Input Transformer 1 : 1 Winding Ratio

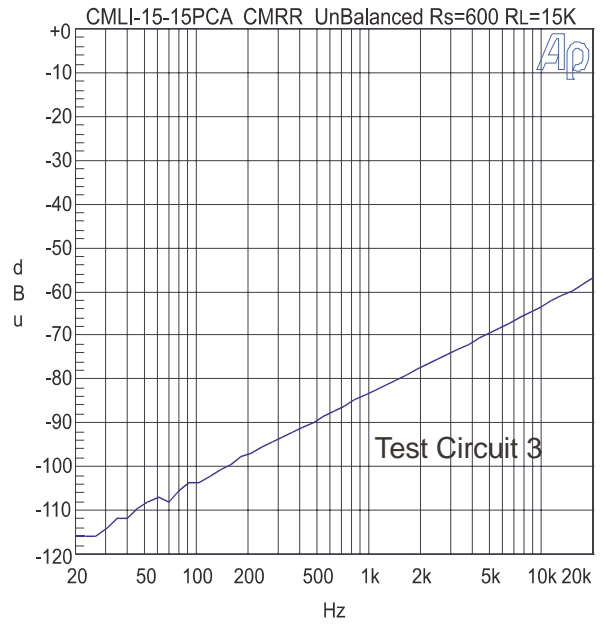

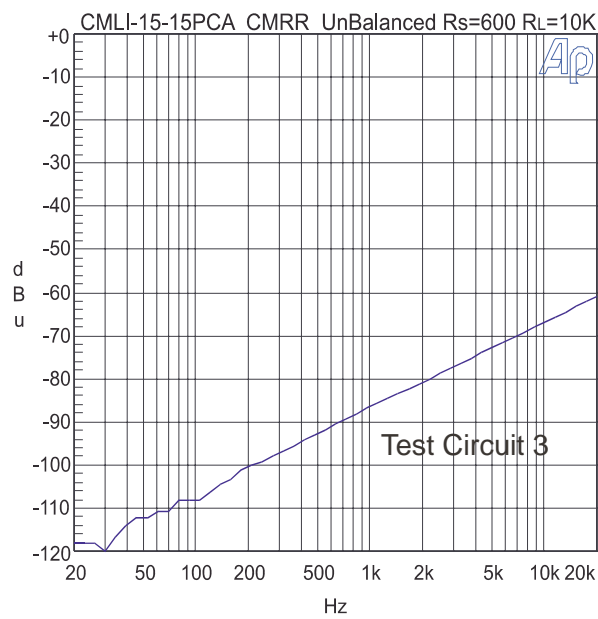

- Use to balance unbalanced inputs
- High input impedance: 18kΩ with 15K load
- Good bandwidth (-3 dB at 82 kHz - 15K load)
- Excellent CMRR: 116 dB at 60 Hz
- Maximum input level +18 dBu at 20 Hz

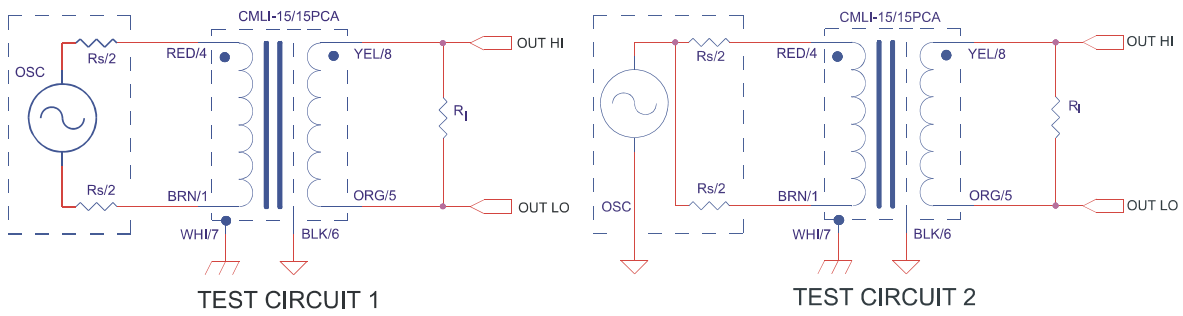

The CineMag CMLI-15/15PCA is commonly employed with wideband input amplifiers. It exhibits good bandwidth, common mode rejection ratio (CMRR), and distortion characteristics. It is available with either single or dual shields. It is designed to operate well when driven by 600Ω lines. All the wires connecting the internal foil shields between windings are spot welded for maximum long term reliability, as is done with all CineMag transformers. It is encased in a μ Metal can which provides 30 dB of magnetic shielding. It is available either with p.c. mount, or leaded versions can be mounted with threaded bushing, studs, or screw holes.
