CMMI-3.5C

Microphone Input Transformer 150Ω to 1.84KΩ - 1 : 3.5 Step-up

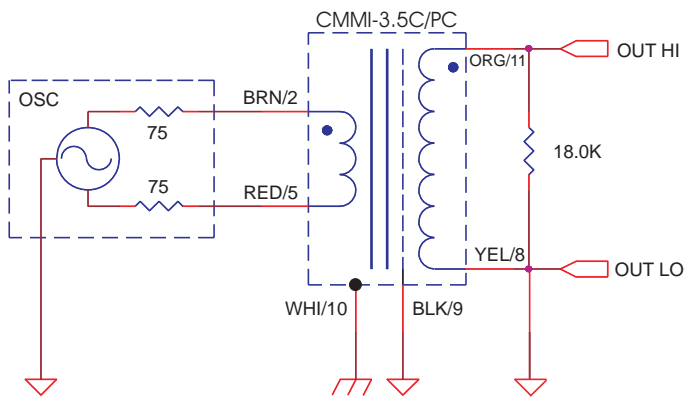

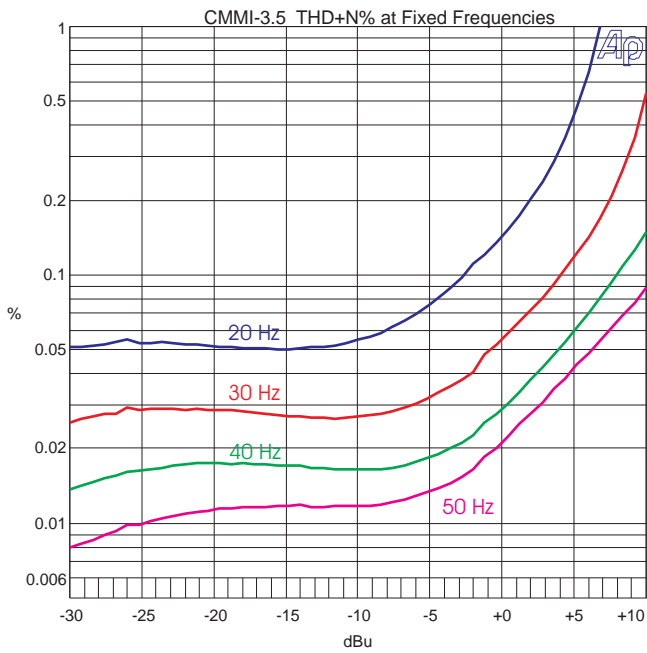

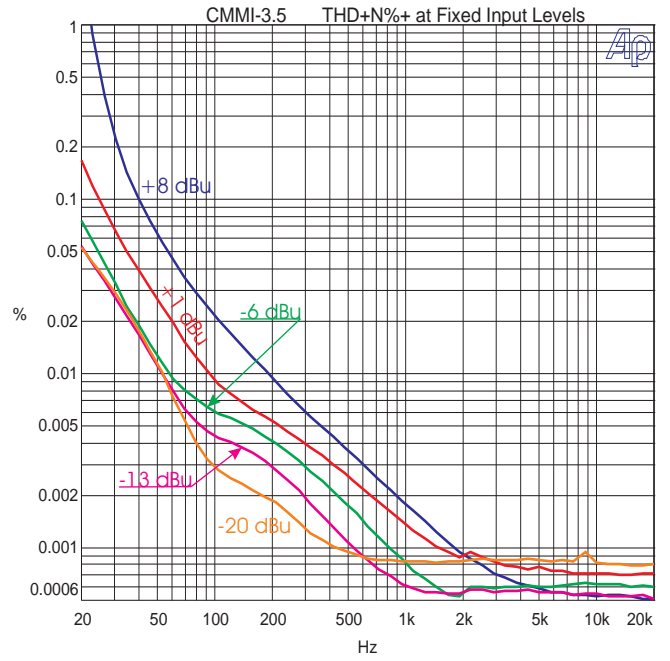

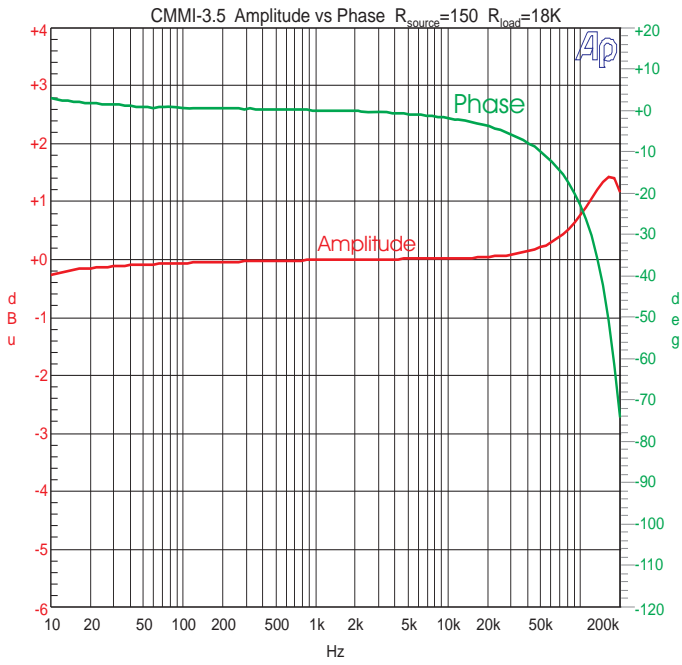

- Excellent for bipolar transistor and F.E.T. amplifiers
- Excellent bandwidth (+1/3 dB at 50 kHz)
- Good CMRR: >110 dB at 60 Hz, >90 dB at 1kHz
- 0.055 THD at -10dB input level, 20 Hz
- +9.7 dB step-up

The CineMag CMMI-3.5C microphone input transformer has a low impedance secondary making it suitable for driving most amplifiers. This transformer exhibits superior bandwidth and phase shift, excellent common mode rejection ratio (CMRR), and very good distortion characteristics. It is encased in a μ Metal can which provides 30 dB of magnetic shielding. It is also available with either a threaded bushing or screw mounting studs. Printed circuit board mount package is also available. As with all CineMag transformers, the wires from the internal foil shields between windings are all spot welded for maximum long term reliability. The CMMI-3.5C is available both in p.c. mount package and with wire leads.
