CMOQ-4

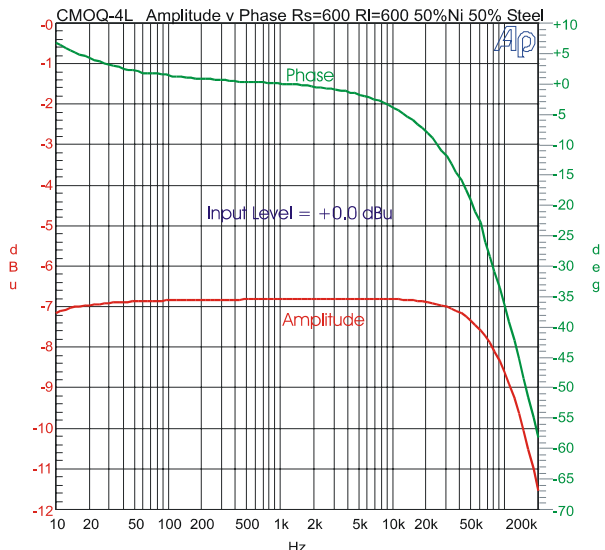

LINE OUTPUT TRANSFORMER Quadfilar Windings

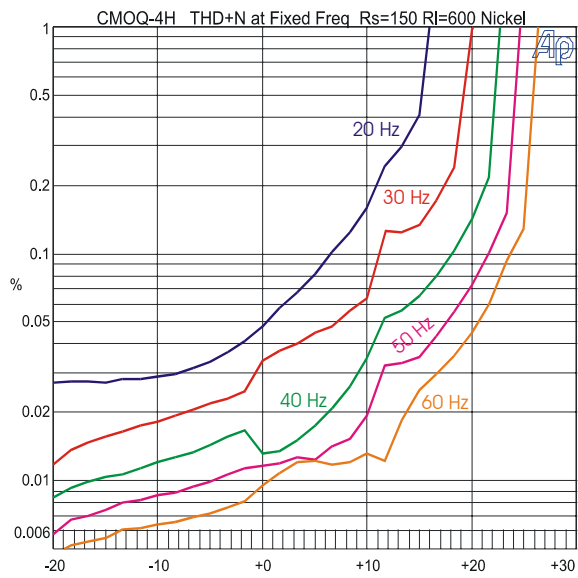

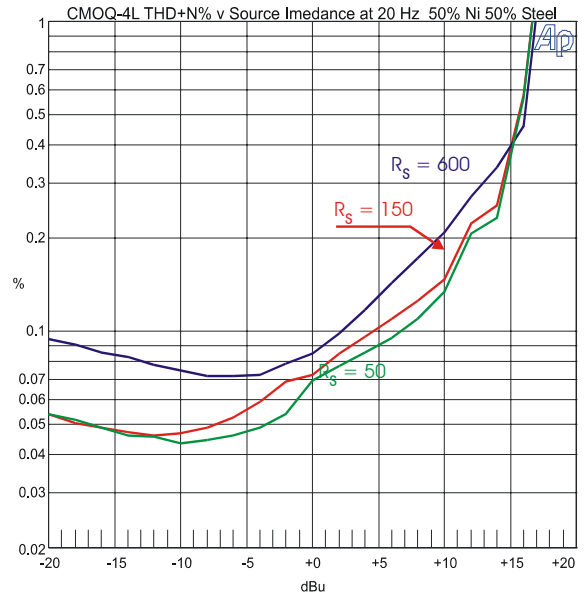

- Excellent bandwidth -0.1 dB at 200 kHz
- $R_s=50\Omega$ 80% Nickel ("HiNi") laminations
- Distortion <0.05% typ at 20 Hz, $R_s=150\Omega$ HiNi
- +15 dBm at 20 Hz, 1% THD+N $R_s\leq 150\Omega$
- Phase Shift -3.5° at 20 kHz, $R_s=150\Omega$
- Excellent coupling

The CMOQ-4 output transformer uses bifilar construction techniques. This four winding transformer delivers good coupling between windings providing very wide bandwidth. It is available with 80% nickel alloy ("H" suffix), 50% nickel + 50% steel ("L"), or all steel ("S"). It can be driven with source impedances of up to 600 Ohms. As with all line driving transformers the amplifier feeding it should be capable of cleanly delivering the power required to reach maximum operating level. See AN-102.
