Black Lion Audio B12A MKII 500 Series Preamplifier

Now in the 500 Series format, Black Lion's popular mic pre gains extra features.

STROTHER BULLINS · SEP 9, 2015

Black Lion Audio has released its B12A MKII 500 (\$599), an API-influenced single channel microphone preamp identical to Black Lion's popular B12A MKII half-rack unit, but in the 500 Series format. The MKII version features an upgraded Cinemag input transformer, 70 dB of gain, and lower noise than the original B12A. It also features an Edcor output transformer, a Hi-Z input, phantom power, 18 dB pad, and phase. It is designed and built in Black Lion Audio's Chicago factory.
